

**CLAIM AMENDMENT**

Please **CANCEL** claims 1-16 without prejudice or disclaimer.

Please **ADD** new claims 17-19, as follows.

17. (Currently Added) A reflective-transmissive type liquid crystal display (LCD),  
comprising:

- a capacitor line formed on a substrate;
- an insulating layer formed on the capacitor line and having a contact hole exposing the capacitor line;
- a capacitor electrode formed on the insulating layer and electrically connected to the capacitor line through the contact hole;
- a passivation layer covering the capacitor electrode;
- a transparent pixel electrode formed on the passivation layer; and
- a reflective pixel electrode formed on the passivation layer.

18. (Currently Added) The reflective-transmissive type LCD of claim 17, further comprising a gate electrode formed on the substrate.

19. (Currently Added) The reflective-transmissive type LCD of claim 18, wherein the gate electrode and the capacitor line are formed of the same material.
